

# TWISTER RANGE

## THE FENTON-WEILL TWISTER

(a) This is the latest Fenton-Weill American Label Range guitar. It incorporates all the features of the well-known Fenton-Weill solid body guitars, combining these with the exciting new "Horn" shape, an even thinner neck, with adjustable truss rod and an entirely new translucent bright red finish.

The assembly plate uses three new high gain pickup units controlled with a six-way multi-selector switch panel.

The Fenton-Weill Featherlite Vibrato, which cannot be improved in any way, is here combined with a unique floating action bridge with adjustable octave stop and string height. The bridge moves with the strings, resulting in an even more resilient response to the slightest finger pressure.

The unique truss rod is controlled from a counter-sunk Allen nut at the blunt end of the fingerboard so that no unsightly aperture covers are necessary on the head of the guitar. The adjustment is so positive that a  $\frac{1}{4}$  turn of the Allen Key produces a movement of  $\frac{1}{8}$ " on the neck of the guitar.

(b) By the express demand of our American Wholesaler, the Twister shaped body has also been made available in place of the existing Twinmaster, Triplemaster and Stereomaster instruments. Where this shape is preferred, it can be ordered in place of the standard Fenton-Weill shape, by referring to the instruments as:

TWISTMASTER

TRIPLE-TWISTMASTER

STEREO-TWISTMASTER

These above are available in the standard Fenton-Weill finishes, Blonde Sycamore, shaded Sunburst Sycamore or translucent bright red.
